01 — ABOUT

Tufan Tuğra İskender

A passionate game developer and the founder of **iBright Games**, with hands-on experience across the full development lifecycle — from prototyping to publishing.

Shipped multiple titles including **MiLord**, **Livber: Smoke and Mirrors**, and **Hive Invasion**, while contributing updates to live projects like **Swarm Grinder**.

I love diving into new engines and tools — if there's a system to build or a pipeline to figure out, I'm probably already halfway through it.

02 - PROJECTS

Library

MiLord

iBright Games

A narrative-driven game featuring advanced pathfinding systems and the custom-built Visual State Machine framework for complex dialogue and branching story logic.

Unity | C# | Narrative | Pathfinding

VIEW ON STEAM

Swarm Grinder

Null State Protocol

Took responsibility for character design, shaping visual identity and gameplay roles. Managed and coordinated the development team.

Unity | C# | Character Design

VIEW ON STEAM

Livber: Smoke and Mirrors

InEv Games

Contributed achievement systems, localization pipelines and console porting. Integrated diverse assets into cohesive gameplay loops.

Unity | Console | Localization

VIEW ON STEAM

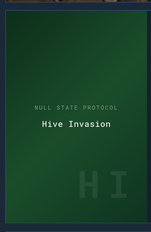
Kardiya: The Winds of Fate

InEv Games

Oversaw the complete development cycle of an RPG — from design through implementation, balancing combat systems, progression and player experience.

Unity | RPG | C#

VIEW ON STEAM



Hive Invasion

Null State Protocol

Large-scale multiplayer game. Led system software design and directed architecture and team workflows to deliver robust multiplayer features.

Unity | C# | Multiplayer

VISIT WEBSITE

Visual State Machine (VSM)

iBright Games — Tool

A custom dialogue-focused state machine framework enabling branching conversations and dynamic narrative flow. Made systems more transparent, reusable and designer-friendly.

C# | Unity | Framework | Tooling
